

DOUBLE STACK OVEN

Includes: 4 Grates

INSTRUCTIONS

STEP 1

Connect hose to propane tank. Tighten counterclockwise and open the valve.

STEP 2

Open the oven door. Remove the oven racks, components, and the oven bottom to access the pilot.

STEP 3

Turn the thermostat to the lowest possible setting.

STEP 4

Depress and hold down the red button while lighting the pilot. Hold the button down for about 45 seconds.

STEP 5

Release the red button. The pilot should stay lit, if not, repeat steps 2-4.

STEP 6

With the pilot lit, replace the bottom panel and close the oven door.

STEP 7

Turn the gas control dial to the **ON** position.

STEP 8

Set the thermostat to the desired temperature. The main burners should be lit.

AFTER HOURS:

Contact your local branch.

NOTE

When lighting a manual pilot system, allow sufficient time for the proper pilot flame to heat the thermocouple that will hold the safety valve open.

If lighting for the first time, allow some time for air to be purged from the gas distribution system. The gas control valve should be closed (OFF) for at least 5 minutes to allow any accumulated gas to escape the combustion chamber.

PROPANE USE

A 40lb propane tank will last for approximately 14 hours.
