

HAND WASHING TRIPLE HOT-COLD SINK

INSTRUCTIONS

STEP 1

Fill the slim vertical tank (light blue with white top) full of clean water.

Maintain a high level of clean water in this tank.

STEP 2

Plug the unit in to a grounded outlet (110 volts, 15 amps). It will take 10-15 minutes for any water inside of the tank to heat up.

Note, there are two plugs that will need to be plugged in.

STEP 3

Use the sink as normal —gray water will drain into the large blue tank with the red top.

When this tank is filled, it will need to be emptied.

AFTER HOURS:

Contact your local branch.
